

# THE KICKS FIX DIARY

Date	Daily Overview Of Progress
09/10/2021	<ul style="list-style-type: none"> <li>• Install Django &amp; Create Admin Superuser</li> <li>• Install django-allauth &amp; required allauth templates from the allauth library (as per course tutorials)</li> <li>• Create main base template &amp; add Bootstrap 4 starter template (v4.6) from <a href="https://getbootstrap.com/docs/4.6">https://getbootstrap.com/docs/4.6</a></li> <li>• Create home app &amp; add index.html</li> <li>• Add url patterns for 'home' &amp; views for index.html</li> </ul>
10/10/2021	<ul style="list-style-type: none"> <li>• Trawl through 899 folders which has 53,659 images of kicks in them &amp; select the best for my project</li> <li>• Sort kick images by dimensions &amp; remove non square images for ease of use &amp; re-sizing later (absolute BALL ACHE this)</li> </ul>
11/10/2021	DAY OFF
12/10/2021	<ul style="list-style-type: none"> <li>• Mess about with navbars for main heading</li> </ul>
13/10/2021	<ul style="list-style-type: none"> <li>• Add some homepage content</li> <li>• Start main header design</li> <li>• Add media &amp; static folder with main CSS file located in static folder</li> <li>• Edit hero image &amp; add to media folder</li> <li>• Start adding CSS to style the home page</li> </ul>
14/10/2021	BREAKDOWNS AT WORK
15/10/2021	<ul style="list-style-type: none"> <li>• Add includes folder</li> <li>• Add large-nav.html for larger screens</li> <li>• Add small-nav.html for mobile devices</li> <li>• Add CSS to both navs &amp; make it cool</li> </ul>
16/10/2021	<ul style="list-style-type: none"> <li>• Still fine tuning home page with CSS so it looks really good.</li> <li>• Adjust widths of search bar on large &amp; mob screens</li> <li>• Add offer banner for future weekly offers</li> <li>• Download some accessory images &amp; descriptions from Etsy &amp; Ebay For project purposes</li> <li>• Work On Fine tuning the database structure before progressing with adding all the products</li> <li>• More Trawling through 899 folders which has 53,659 images of kicks in them &amp; select the best for my project</li> <li>• Sort kick images by dimensions &amp; remove non square images for ease of use &amp; re-sizing later (absolute BALL ACHE this)</li> </ul>
17/10/2021	<ul style="list-style-type: none"> <li>• Draw out my schema in drawSQL for better presentation purposes as I had it as a sketch in my project book</li> <li>• Add schema to README &amp; add small write up</li> </ul>

18/10/2021	<ul style="list-style-type: none"> <li>• Tried adding my first ever app (Kicks) &amp; models but had a nightmare as it threw up all sorts of errors (See Bug Issues)</li> <li>• Contacted Tutor Support &amp; my Mentor but it was late so looked into it myself using Slack &amp; online help (noob mistake tbh)</li> <li>• Had the FLU jab earlier on so wasn't feeling great so once I figured the issue out, I went to bed &amp; decided I will fix it tomorrow</li> </ul>
19/10/2021	<ul style="list-style-type: none"> <li>• Added my Common App &amp; associated models</li> <li>• Tried dry run migration then made my migrations when everything checked out okay this time (PHEW!)</li> <li>• Add initial Category fields &amp; initial Colour fields, in Admin (I have no fixtures so have to manually input them)</li> <li>• Added my Kicks app &amp; associated models (copied &amp; pasted from my failed attempt last night)</li> <li>• Imported my common models to the Kicks model &amp; after a dry run test .... migrated</li> <li>• Removed extra 's' from Kicks class in Admin (Kickss ha ha, so annoying) &amp; changed my KicksType class name to Type, as it looks much better in Admin</li> <li>• Add initial Brands, Types &amp; my first Kicks, in Admin manually as I have no fixtures</li> <li>• Add price to Kicks model as I forgot this &amp; migrate (had an issue but fixed this, see bugs)</li> <li>• Organise my Admin display for Kicks, Brands &amp; Types in Kicks App / Organise display for Categories in Common App</li> </ul>
20/10/2021	<ul style="list-style-type: none"> <li>• Organise Categories, Brands &amp; Types alphabetically in Admin</li> <li>• Add Kicks views &amp; templates .... Test kicks.html is working</li> <li>• LOST A WHOLE EVENING DUE TO CSS BUG</li> </ul>
21/10/2021	<ul style="list-style-type: none"> <li>• Add white background to Kicks page</li> <li>• Add 'for loop' to main Kicks page to iterate through kicks images &amp; display (tested functionality using one image as that's all I've added in Admin)</li> <li>• Add a default image &amp; two more image fields to Kicks model for use, later on in the project (this is an add-on to my project as it evolves)</li> <li>• BUG - Couldn't get my image to display when I added my if / else statement but I had made a school boy error (see bugs)</li> <li>• Add 4 more sets of kicks to admin &amp; test on Kicks page, making sure alignment etc is okay</li> <li>• I had to change the Kicks page &amp; price background to white because it looked bad when I had it as 'my-back-white' (most images are bg white)</li> </ul>
22/10/2021	<ul style="list-style-type: none"> <li>• I selected 63 kicks folders from my Kaggle set for utilising in my project (if I have time I will add more at a later date but there is so much to do just to get the images right &amp; then I have to find all the required data for my database online for each kicks)</li> <li>• Start selecting 3 images from each kicks folder for each kicks set</li> <li>• Re-number each image in groups of 3 so that they are no duplicate numbers</li> <li>• Resize each image to 400 x 400 pixels using Paint 3D, for easy integration with my website &amp; for complete continuity across the board</li> <li>• Also add each Kicks set names to my Kicks Data (Excel Spreadsheet) so that I can search the info required online for my Django Kicks Database</li> <li>• Find the required information like sku, description, price, type, etc from internet. I mainly used <a href="https://stockx.com">https://stockx.com</a> &amp; <a href="https://www.goat.com">https://www.goat.com</a></li> </ul>
23/10/2021	<ul style="list-style-type: none"> <li>• Continue off from yesterday to get the 63 kicks required info added to my Excel Spreadsheet for easy implementation into my Django database</li> <li>• Added another 27 Kicks folders &amp; therefore Kicks image sets, for resizing by eliminating the non-square images from the sets to save any hassle</li> <li>• Select the best 3 images from each image set &amp; then re-size them to 400x400 pixels, using Paint 3D again</li> <li>• Find all of the additional Kicks information from the internet from the same sources as mentioned yesterday</li> </ul>
24/10/2021	DAY OFF
25/10/2021	<ul style="list-style-type: none"> <li>• Start adding some more Kicks to the database manually plus their associated images</li> <li>• Add border to cards &amp; mb-5 for separating the cards from the ones below plus I added a border-top to Card Body to separate the name &amp; price from img</li> <li>• Add regular shadow to each card to make them stand out more</li> <li>• Mentor Session</li> <li>• Create a Kicks fixture &amp; Common fixture of my databases, for learning purposes (never tried this before) &amp; also for backup purposes :)</li> </ul>

26/10/2021	<ul style="list-style-type: none"> <li>• Add a media query for mobiles as my navbar was overlapping over the top of my Kicks page</li> <li>• Add individual kicks_details view, url &amp; page for rendering</li> <li>• Add kicks image, name, price &amp; description to the kicks_detail page for displaying</li> <li>• Add a Bootstrap Carousel to kicks_detail page, utilise the 3 kicks images per kicks set stored in the database &amp; style to suit</li> <li>• Removed Bootstrap carousel icons &amp; added my own so I could use my own colours &amp; I also changed the colours of the indicators to suit as well</li> <li>• Had to adjust some of the images as the were not resized to 400x400 pixels (must have slipped by due to doing so many)</li> <li>• Had to adjust some that were maybe 400x398 which I thought would be okay but caused small glitches with carousel indicators &amp; icons</li> <li>• Check the rest of ALL my kick images to make sure I have re-sized them perfectly to 400x400 &amp; make sure the best image will be Image1</li> </ul>
27/10/2021	<ul style="list-style-type: none"> <li>• Added a unisex category to my Categories database so that any unisex Kicks can be displayed for both men or women</li> <li>• Added my Accessories App &amp; associated models</li> <li>• Tidy up Accessories admin &amp; add ALL my Accessories Types manually</li> </ul>
28/10/2021	<ul style="list-style-type: none"> <li>• Edit Accessory images, choose best three, re-size to 400 x 400 pixels &amp; rename them, starting a1</li> <li>• Find some sort of descriptions from the internet as I forgot to get these when I downloaded the images :(</li> <li>• Need to change my accessories model to add another two images as I was only going to display one image for the Accessories items</li> <li>• Add 12 sets of Accessories to the Accessories database for testing on my Accesories page ..... when I develop it ha ha</li> <li>• Add Accessories views &amp; templates (duplicated the Kicks ones &amp; changed to suit)</li> <li>• Test accessories.html is working &amp; displaying my 12 sets from the database ..... All working ..... POW !!! I'm good at this coding malarkey :)</li> </ul>
29/10/2021	<ul style="list-style-type: none"> <li>• Added my accessory_detail view, url &amp; template ..... Tested it all after solving a wee bug &amp; all good now</li> <li>• Add Kicks query functionality to the Search Bar &amp; test it's working</li> <li>• Messing about with my queries to get them to work but need to look deeper into it all as my links &amp; queries won't work under my current DB layout</li> </ul>
30/10/2021	<ul style="list-style-type: none"> <li>• Add 'Sex' model to Common app for making my queries work for my Navbar links</li> <li>• Had issues trying to get queries started but once I figured out the concept I knew it would all work nicely</li> <li>• Added queries for new-in kicks which are either male &amp; unisex, female &amp; unisex, just kids &amp; all new-in kicks. I added the unisex options to male &amp; females only so they will appear on both male &amp; female filters when the appropriate Navbar link is selected</li> <li>• Added queries for Sales items similar to above but only for Sales obviously ha ha</li> <li>• Wanted a Brand dropdown-submenu &amp; could find a Bootstrap Dropright one but could NOT get it to work in another Bootstrap dropdown. It was something to do with JavaScript from the Parent Dropdown would STOP it from functioning. I searched for fixes for a while but no matter what I tried it would not work. I then found a snippet of what I needed (see credits in README). I utilised the code &amp; made it my own. I think it looks cool !!!!</li> <li>• Import Brand to the Home view for rendering to homepage for adding to navbar submenu</li> <li>• Add FOR LOOP to Men navbar dropdown Brands link for iterating through so to display avaiable Brands for selction</li> <li>• Add Brand filter in Kicks view for filtering ALL kicks to the selected brand from within the navbar submenu</li> <li>• Import Brand to the Kicks view for rendering to the Kicks page so thats the navbar Brands submenu works here too</li> <li>• Add sex filter to Kicks Brand filter so that when user selects men/brands/adidas it displays ALL male addidas brands</li> <li>• Repair some original navbar query links as they changed when I added my sex model &amp; removed sex from the Category database</li> </ul>

31/10/2021	<ul style="list-style-type: none"> <li>• Tried creating a JS file in a Static JS folder &amp; adding my JavaScript for my Brands dropdown-submenu but couldn't get it to work (maybe try later)</li> <li>• Added Brands dropdown-submenu to Women &amp; Kids. Tested it ALL works okay</li> <li>• Changed the name of Type model to Style within the Kicks app, made the migrations &amp; other necessary changes. (Style is a more appropriate name)</li> <li>• Import Style to the Home view for rendering to homepage for adding to navbar submenu</li> <li>• Add FOR LOOP to Men navbar dropdown Styles link for iterating through so to display available Styles for selection</li> <li>• Import Style to the Kicks view for rendering to the Kicks page so that the navbar Styles submenu works here too</li> <li>• Add Style filter in Kicks view for filtering ALL kicks to the selected style from within the navbar submenu</li> <li>• Add Sex filter to Kicks Style filter so that when user selects Men/Styles/Lifestyle it displays ALL male lifestyle kicks</li> <li>• Added Styles dropdown-submenu to Women &amp; Kids. Tested it ALL works okay</li> <li>• Import Accessories Type to the Home view for rendering to homepage for adding to navbar submenu</li> <li>• Add FOR LOOP to Accessories navbar dropdown Types link for iterating through so to display available Types for selection</li> <li>• Import Type to the Accessory view for rendering to the Accessory page so that the navbar Types submenu works here too</li> <li>• Add Type filter in Accessory view for filtering ALL accessories to the selected type from within the navbar submenu</li> <li>• Had a bug in that when I had displayed my accessories by a chosen type that submenu would not display any types for selection (See Bugs)</li> <li>• Added Accessories Types to my Kicks view so the Accessory Navbar submenu would work from this view as it was BLANK before :)</li> <li>• Added Kicks Brands &amp; Styles to my Accessories view so the Men, Women &amp; Kids Navbar submenus would work from this view</li> <li>• Added Brands, Styles &amp; Types to my kicks_detail &amp; accessory_detail views so the Navbar submenus would work from these views as well.</li> <li>• Add Accessories Category filter to accessories views for when Accessories was selected from the New In or Sales dropdowns in the navbar</li> </ul>
01/11/2021	<ul style="list-style-type: none"> <li>• Refactored my Kicks Queries as I was duplicating the Sex filter so I used it first then filtered Brand or Style of my Sex results (tested them too)</li> <li>• Couldn't change the Category one because I need an All New In or ALL Sales options so had to leave it the way it was</li> <li>• Add code to change Kicks Page Title depending on which query/link, the user selected from the Navbar</li> <li>• Added Friendly names to Sex model for better Title Displays (Men instead of Male etc) &amp; also to Colour Model (as I know I'll need colour one later)</li> <li>• I had to mess about to get ALL Kicks titles changing to selected navbar query but I got there. Took a bit of time but I think it's worth it :)</li> <li>• Add Accessories page titles code, depending on navbar selection</li> <li>• Tidy Kicks views code to make better &amp; more readable</li> </ul>
02/11/2021	BREAKDOWNS AT WORK
03/11/2021	BREAKDOWNS AT WORK
04/11/2021	<ul style="list-style-type: none"> <li>• Add sort &amp; direction functionality on Kicks Page</li> <li>• Add card animation when hovering for a little uniqueness</li> <li>• Add Brand &amp; Style tags to each Kicks card</li> </ul>
05/11/2021	<ul style="list-style-type: none"> <li>• Had to add Brand then Sex filters again plus Style then Sex filter so my Titles would work for when the Brand/Style tags were clicked</li> <li>• Add Brand &amp; Style tags to Kicks detail pages</li> <li>• Needed to change Accessories model 'accessory_type' to just 'type' so that my sort JS would work when splitting the value</li> <li>• Add Accessories sort &amp; direction functionality &amp; test</li> <li>•</li> </ul>

06/11/2021	<ul style="list-style-type: none"> <li>• Create Bag app, urls &amp; templates. Test all works</li> <li>•</li> <li>• Add Home, Social &amp; Discount models</li> <li>• Add Main Slogan to home page for displaying (just to test as if admin wants to change it they can with ease)</li> <li>• Create context.py &amp; add bag logic using Discount field from Django admin</li> <li>• Add 'form' for adding kicks to the shopping bag on Kicks Detail page</li> <li>• Add 'add_to_bag' functionality for Kicks &amp; test</li> <li>• Add 'add_to_bag' functionality for Accessories &amp; test</li> <li>• Had to change item_id request to 'kicks.sku' &amp; 'accessories.sku' as both products have the same id's so the quantity added id's together (See Bugs)</li> <li>• Had issues getting both Kicks &amp; Accessories to ADD to the bag but wrote some code to check each item_id in the bag &amp; it worked (See Bugs)</li> </ul>
07/11/2021	AWAY ALL DAY
08/11/2021	<ul style="list-style-type: none"> <li>• Add Shopping bag code to iterate through my bag contents &amp; display some info</li> <li>• Changed bag.items code so that I have a 'Product' instead of either a 'Kicks' item or an 'Accessories' item as it makes it simpler</li> <li>• Refactor my bag contents code in the Context.py file as I was duplicating some depending on if the item was Kicks or Accessories (looks better now)</li> <li>• Added a JSONField for sizes to my Size model, along with name &amp; friendly name</li> <li>• Added Kids Name &amp; Sizes JSON data to Size in Django Admin</li> <li>• Had issues trying to get my Kids sizes to display but eventually figured it out so I will work on best way to display it all :)</li> <li>• Added UK, EU &amp; US buttons to Kicks Details page for Size options depending on Country</li> </ul>
09/11/2021	<ul style="list-style-type: none"> <li>• Add JavaScript to change KIDS size options depending on what Country Origin is selected from Bootstrap Radio Buttons</li> <li>• Added Women Name &amp; Women Sizes JSON data to Size in Django Admin</li> <li>• Add JavaScript to change Female size options depending on what Country Origin is selected (absolute nightmare ... a 5 HOUR nightmare, see bugs)</li> <li>• Added Men Name &amp; Men Sizes JSON data to Size in Django Admin</li> <li>• Add JavaScript to change Male size options depending on what Country Origin is selected</li> <li>• BUG - UNISEX was one of my Sex fields so that has messed my lovely JS code ha ha (See Bugs for options)</li> </ul>
10/11/2021	<ul style="list-style-type: none"> <li>• I had to change various names &amp; add origin i.e UK to {{ size }} that was selected so I could pass these to my bag contents for easier display</li> <li>• I therefore had to change my JavaScript as well so it would still work</li> <li>• I added code to my bag view for getting the Kicks size &amp; checking if size is already in bag, if so add to quantity &amp; if not add it to the bag</li> <li>• I had to change by code for differentiating between Kicks &amp; Accessories as my Kicks item data was now a dictionary of quantity &amp; size</li> <li>• Tested that a Kicks item with sizes etc and any accessories (no sizes) were rendered to my bag page .... all worked okay</li> <li>• ADD SOME BUGS TO GITPOD ISSUES PAGE</li> </ul>
11/11/2021	<ul style="list-style-type: none"> <li>• Add increment &amp; decrement to kicks_details page</li> <li>• Add JS to make the increment &amp; decrement function on Kicks_details page</li> <li>• Add increment &amp; decrement to accessories_details page</li> <li>• Utilise previous JS for accessories details page</li> <li>• Add increment &amp; decrement to bag contents page</li> <li>• Utilise previous JS for bag contents page</li> <li>• Add update bag view, url &amp; JS</li> <li>• Test updating items in the bag but while any Accessories will update the Kicks throw up an ERROR ..... wee BUG needs solved !!!! (See Bug No. 26)</li> </ul>

12/11/2021	<ul style="list-style-type: none"> <li>• Bug crushed from last night ha ha ..... Silly mistake as always but just needed to figure it out which I did</li> <li>• Add remove items code in bag view, url &amp; JS</li> <li>• Test removal of items from bag &amp; all works okay</li> <li>• Fix US sizes display issue - just needed a wee space between US and size i.e US 7 instead of US7</li> <li>• Start LOGO design for website. Match the colours in the Navbar within my logo so I used Minion Yellow to keep unity within the nav</li> </ul>
13/11/2021	<ul style="list-style-type: none"> <li>• Finish LOGO Design &amp; Try on my website</li> <li>• Create processor.py file in the main The Kicks Fix folder for adding all other context files &amp; add it in my TEMPLATES SETTINGS too</li> <li>• Add logo imageField &amp; logo urlField to my Home model for utilising storing my logo image in the backend</li> <li>• Add logo image to Django database and change the logo image 'src' to use template format - works well &amp; I love my wee logo</li> <li>• Also moved my main_slogan context code from my 'home view' to the site_context' in processor.py for better consistency</li> <li>• Add my promotional_bar field to the 'site_context' so it will display on all pages &amp; change when I change it in admin (backend)</li> <li>• Add basic toasts for success, error, warning &amp; info</li> <li>• Design The Kicks Fix logo for toast header &amp; add it to media folder for testing (if it looks good I'll add it to Home model)</li> <li>• Add toast messages for adding, updating &amp; removing items from the bag</li> <li>• Add CSS to make success toast look better</li> <li>• Add some additional code to show items in shopping bag preview success toast</li> <li>• Fine tune sizes for displaying shopping bag preview as logo takes up a little bit more overall &amp; use CSS for changing delivery calc text size</li> </ul>
14/11/2021	WORK UNFORTUNATELY (OVERTIME)
15/11/2021	<ul style="list-style-type: none"> <li>• Add 'checkout' app &amp; Order model (Need to figure out Order Line Item as I have two different products)</li> <li>• Add checkout views, urls &amp; checkout form in forms.py</li> <li>• Add checkout html for displaying ordering form and bag contents</li> <li>•</li> </ul>
16/11/2021	<ul style="list-style-type: none"> <li>• Add Static / Checkout folder with a css file &amp; js file for Checkout styling</li> <li>• Add Stripe JS link taken from their website &amp; test public key (as I forgot &amp; wondered why my stripe element wouldn't display)</li> <li>• Add initial CSS &amp; JS code taken from the Stripe website</li> <li>• Check the Stripe element out &amp; test Stripe functionality so far</li> <li>• Install Stripe, add Stripe Card Event errors JS &amp; get bag_contents total from bag.contexts in checkout views</li> <li>• Add my Stripe Public Key &amp; Stripe Secret Key in SETTINGS &amp; get them from the environment</li> <li>• Add Stripe verification code in checkout views &amp; add JS for handling form submission</li> <li>• Add code to add order to Orders database in checkout views</li> <li>• Add checkout success.html with basic acknowledgement display (OrderLineItem required before I can continue)</li> <li>• Add OrderLineItem model but have a bug where I cannot get it to display inline with orders BUG # 29</li> <li>• Fixed above bug &amp; I now have my items displaying INLINE at the bottom of my order (just need to display either Kicks or Accessory but NOT BOTH) BUG #30</li> </ul>

17/11/2021	<ul style="list-style-type: none"> <li>• Add save / delete signals that I left out earlier due to OrderLineItem issue previously</li> <li>• Add summary of order to success page</li> <li>• Add a cool but basic payment processing loader taken from the web but tweaked to suit my colours &amp; background</li> <li>• Add webhook handler for Stripe webhooks</li> <li>• Add webhook views &amp; then test using Stripe test webhooks function</li> <li>• Attempt fixing OrderLineItem bug for displaying either Kicks or Accessory individually per line but I'm gonna give up as it's still workable the way it is</li> <li>• Add The Kicks Fix logo to the Payment Processing loader / spinner</li> </ul>
18/11/2021	<ul style="list-style-type: none"> <li>• Added checkout form data caching in payment intent</li> <li>• Had a BUG, in that in my terminal it would not display the billing address, shipping address &amp; also the meta data within my intent (see BUG 31)</li> <li>• Finished the webhook handler &amp; tested it all .... looks good</li> <li>• Tidy up code within Checkout &amp; delete unrequired / test code.</li> <li>• Also added a little transparency to my loader background</li> </ul>
19/11/2021	<ul style="list-style-type: none"> <li>• Import CountryField &amp; amend Order model country field</li> <li>• Create Profile App, urls &amp; set basic views for testing</li> <li>• Change ALL Allauth account files to suit my website</li> <li>• Add Profile Form for testing</li> <li>• Add Profile page but I want a separate Order History page so the user can check out their previous orders (needs work &amp; thought)</li> </ul>
20/11/2021	<ul style="list-style-type: none"> <li>• Renamed UserProfile to UserOrdersProfile as I want to keep UserProfile for their Profiles &amp; NOT Order History</li> <li>• Removed DOB, fname, lname etc as this is already within the Allauth User admin (started to get really confusing but I'll get there)</li> <li>• Added previous orders views for when user clicks on order in their Order History</li> <li>• Added Users profile info to checkout page too for ease of checkout</li> </ul>
21/11/2021	<ul style="list-style-type: none"> <li>• Rename UserOrderProfile to UserProfile for better naming convention, as I thought this just stored the users Default Address</li> <li>• Thought I had a BUG when my webhook handler wasn't displaying in terminal or on Stripe (I didn't have PORT on PUBLIC .... always gets me that one (2hrs later))</li> <li>• Update Webhook Handler to handle the profiles too</li> <li>• Add confirmation emails for when an order has taken place</li> <li>• Fix issue with items not displaying properly in Order History (just had wrong names due to having two products)</li> <li>• Testing Additional Profile Info like DOB, Profile Image, etc, etc</li> </ul>
22/11/2021	<ul style="list-style-type: none"> <li>• Set SKU to required for both Kicks &amp; Accessories as I know my logic needs it &amp; this is for Product Management purposes</li> <li>• Remove sizes_available from my Kicks model as I have no need for it now (was for possible inventory use but this will take too much time)</li> <li>• Add Colours option to Kicks Men, Women &amp; Kids Nav Dropdowns</li> <li>• Add Colour filters in views for displaying selected Colour Kicks when Colour is selected</li> <li>• Add message on screen so that if no specific Kicks that were selected are available &amp; the user can continue shopping</li> <li>• Add Kicks Brand, Style, Colour &amp; also Accessories Type to my processor.py for utilising across the site (<b>See Bug No. 32</b>)</li> <li>• Delete unrequired code from Home, Kicks &amp; Accessories views after I moved above to processor.py</li> <li>• Add toast_logo field to my Home model, add toast_logo image to DB, add toast_logo to site_context &amp; link to Success Toast for testing</li> </ul>

23/11/2021	<ul style="list-style-type: none"> <li>• Adding Loader Logo to Home model for loading from server when required</li> <li>• Add toast logos to other toasts</li> <li>• Adjust my-black-btns &amp; make ALL Black buttons the same where possible for site continuity</li> <li>• Add if else statement for promotional bar so that if the store has no offers, it displays "New offers coming soon !" (still needs some alternatives though)</li> <li>• Start the Product Management for admin &amp; superusers</li> <li>• Add KicksForm &amp; for ALL ForeignKeys make them display their Friendly names (I had a small Categories bug, see <b>Bug No. 33</b>)</li> <li>• Add add_kicks view, url &amp; basic template for testing out how it looks</li> <li>• Finish add_kicks functionality &amp; test</li> <li>• Add edit_kicks view, url, template &amp; test functionality</li> <li>• Add delete_kicks view, url &amp; test functionality</li> <li>• Add AccessoriesForm &amp; for ALL ForeignKeys make them display their Friendly names</li> <li>• Add add_accessory view, url, template &amp; test functionality</li> <li>• Add edit_accessory view, url, template &amp; test functionality</li> <li>• Add delete_accessory view, url &amp; test functionality</li> <li>• Add some security to views &amp; test</li> <li>• Adjust borders &amp; buttons across website to give them more continuity</li> </ul>
24/11/2021	<ul style="list-style-type: none"> <li>• Add bugs to Github</li> <li>• Start README process</li> <li>• Add rest of Accessories data to database manually</li> <li>• Add more Kicks to Database manually</li> <li>• Add remaining Kicks to Database manually</li> <li>• Get JSON dumps of Kicks &amp; Accessories databases</li> <li>• Remove messages from bag area view when you update or remove items as the user is already in the bag area so does not need an update</li> <li>• Remove all 3 image_url's from my Admin forms for Kicks &amp; Accessories as the SuperUser will not require these plus it tidies it up</li> <li>• All newly added Kicks names, images &amp; descriptions checked as best I can for errors &amp; good display purposes on large screen</li> <li>• All newly added Accessories names, images &amp; descriptions checked as best I can for errors &amp; good display purposes on large screen</li> <li>• Add delete confirmation modal for testing so when Admin wants to delete an item, the modal double checks first</li> <li>• Tidy code up &amp; delete unrequired code</li> </ul>
25/11/2021	<ul style="list-style-type: none"> <li>• Trying to add Delete Confirmation modal &amp; when I tried to delete last test product it deleted the first ffs :( (Needs work)</li> <li>• Fine Tune Admin pages</li> <li>• Deploy to Heroku (NIGHTMARE) (See <b>Bug No. 33</b>)</li> <li>• Add proper email verification &amp; test</li> <li>• Adjust CSS for smaller screens</li> <li>• Shopping Bag Refactoring for smaller screens</li> <li>• Fix some linting issues</li> <li>• Designed my own favicon using my chose site colours using Paint 3D &amp; add it to base.html</li> <li>• Removed unused Profile code that I had used for test purposes (Too late to mess about with it now)</li> </ul>
26/11/2021	<ul style="list-style-type: none"> <li>• Add Bugs to README on separate BUGS page</li> </ul>

27/11/2021	<ul style="list-style-type: none"> <li>• Finish Bugs to README</li> <li>• Redo SCHEMA and add database info to README</li> <li>• Start testing write up</li> <li>• Fix any small issues &amp; bugs as I carry out some testing</li> <li>• Tidy up this spreadsheet for sharing on README</li> <li>• <b>GITHUB IS DOWN SO CAN'T DO ANYMORE !!!!!</b></li> </ul>
28/11/2021	<ul style="list-style-type: none"> <li>• TESTING Write up &amp; fix any minor bugs along the way</li> <li>• Add Contact Us views, urls &amp; template</li> </ul>
29/11/2021	<ul style="list-style-type: none"> <li>• Add Local Deployment &amp; Heroku Deployment steps to README</li> <li>• Add TLC Info now called KFC and add urls, views and template</li> <li>• Add Contact Us &amp; KFC to Testing And do write up</li> <li>• Tidy code up, add some labelling in HTML / CSS, shorten code length in Profiles App add docstrings to Profiles APP</li> </ul>
30/11/2021	<ul style="list-style-type: none"> <li>• Validate HTML &amp; repair errors</li> <li>• Validate CSS &amp; repair errors</li> <li>• Validate JS &amp; repair errors</li> <li>• Validate Python &amp; repair errors</li> <li>• Complete Testing Write Up</li> <li>• Do final testing of everything with my website to check that there are no errors raised during Validation adjustments</li> <li>• Write up RESET PASSWORD BUG as it only works ha ha</li> <li>• Write Up Final README CONCLUSION</li> <li>• Set Up Superuser &amp; normal User for Code Institue to test with</li> </ul>
30/11/2021	<b>HAND IN FINAL PROJECT AND TRY NOT TO BE SAD IT'S ALL OVER !!!!</b>
